

# hp no.56 black inkjet print cartridge

The HP No.56 Black Inkjet Print Cartridge (c6656ae) is a high quality cartridge designed for use with the HP Deskjet 5550 series and HP Photosmart 7150 and 7350 printers.

Delivering tiny 17 picolitre drops of high density, pigment-based black ink, it produces consistently crisp, laser-quality black text. The No.56 cartridge also works together with the HP No.57 Tri-colour Inkjet Print Cartridge used in these printers to produce superb quality graphics and text-based documents, such as promotional material, brochures, newsletters and other professional documents.

### quality and value for money

With 416 nozzles and a firing frequency of up to 18 kHz, this cartridge will produce crisp, sharp results with no bleed or feathering. An efficient ink delivery system ensures maximum number of pages from a compact cartridge: its 19 ml capacity gives it the ability to print an average of 450 pages at 5% density.

### 'swap out' for six-colour printing and outstanding lightfastness

In normal use, the HP No.56 black cartridge works together with the HP No.57 tri-colour cartridge to produce high quality colour outputs. However, for ultimate photo quality, the No.56 cartridge can temporarily be replaced with the HP No.58 Photo Inkjet Print Cartridge (c6658ae) to create a six-colour ink system.

The light magenta, light cyan and black inks of the No.58 cartridge combine with the cyan, magenta and yellow inks of the No.57 cartridge to produce virtually grain-free images of a quality equal to that of traditional photos. When used with new HP Premium Plus Photo Paper, this system produces prints with a lightfastness that lasts for generations.

### features

- latest printhead design
- drop size of 17 pl
- efficient ink delivery system
- hp advanced pigment ink
- for use with hp deskjet 5550 series and hp photosmart 7150 / 7350 printers
- works together with hp no.57 tri-colour inkjet print cartridge
- 'interchangeable' with hp no.58 photo inkjet print cartridge
- single snap-out/drop-in cartridge

### benefits

- 416 nozzles and a firing frequency of up to 18 kHz for outstanding print quality
- even sharper and crisper black text and graphics
- 19 ml capacity gives an average of 450 pages (at 5% density)
- deliver high density prints and professional results on any paper
- scientifically designed to interact with hp colour inkjet printers to deliver consistently crisp, laser-quality black text
- superb quality graphics and images - for newsletters, brochures and other professional documents
- 'swap out' cartridge for a six-colour ink system - more realistic skin tones, enhanced contrasts, brighter, more vibrant colours and exceptional resistance to fading
- clean, fast and easy with a single snap-out/drop-in black inkjet print cartridge

## frequently asked questions

### what are the key benefits of the hp no.56 black cartridge?

The main benefits of this cartridge result from the use of pigmented ink that enables the placement of extremely small drops which are precisely positioned on the page. Overall, this cartridge has been specifically designed to work with HP colour inkjet printer technology to produce crisp, laser-quality results.

### how does it work with the hp no.57 cartridge?

The HP No.57 cartridge is a tri-colour inkjet print cartridge containing cyan, magenta and yellow inks. The two cartridges work together to deliver superb quality for colour graphics - with rich black text - making them an ideal combination for promotional literature such as brochures, newsletters and other high-value documents.

### where does the hp no.58 cartridge fit in?

For ultimate photo quality results, the HP No.56 black cartridge can be temporarily removed and replaced with the HP No.58 Photo Inkjet Print Cartridge. This contains three inks - light cyan, light magenta and dye-based black - which work in combination with the standard CMY inks of the HP No.57 Tri-colour Inkjet Print Cartridge to create a new six-colour system that is central to HP Photoret IV technology.

### won't the cartridge dry out outside the printer?

Each HP No.58 Photo Inkjet Print Cartridge comes with a print cartridge protector - which can be used to store either cartridge (i.e. the No.58 or No.56) when not in use.

### could I mix up the no.56 and no.58 cartridges ?

While both cartridges are designed to swap between the same slot in the printer, they are clearly colour coded to minimise the possibility of mistakes. The HP No.56 black cartridge has a grey lid, while the HP No.58 photo cartridge features a red lid.

### which printers offer hp photoret IV technology?

The HP Deskjet 5550 series and HP Photosmart 7150 and 7350 printers can all be used to realise the benefits of HP Photoret IV technology in conjunction with the HP No.57 and No.58 cartridges.
